

# Transforce

## (Forced Entry Simulator)

The TransForce forcible entry training simulator allows firefighters, airport firefighters, police and security service's, "hands-on" practice of forcible entry skills. Utilizing forced entry equipment such as the Enforcer or Haligan tool. Many services read about forcible entry and may even practice some techniques on acquired structures, but only the Transforce allows them to actually "force" a door and then have the opportunity to do it over and over again.

The TransForce has the unique ability to replicate four forcible entry techniques:

- *Outward swinging door*
- *Inward swinging door*
- *Confined area outward door*
- *Secure cockpit door scenario*

Upon completion of an exercise, quickly reset the prop for the next student. It is a great investment for all services and a must for training providers. The TransForce can be a stand alone prop or attached to a training structure.
